

After an all too brief return to our 'normal' meetings we are in lockdown again so we are reverting to virtual benching. Hopefully these beauties will help provide a little joy to your day.

A stunning collection as always from Peter & Jane D'Olier to restart proceedings

\*FS = Flower size based on IOSPE

← *Pleurothallis phalangifera*. Wow what a beauty! Looking this up on IOSPE I found it comes in a range of distinctly different colours. I think Peter & Jane hit the jackpot with their plant. I love the dark colours & have a soft spot for anything purple so this one is a double whammy, quite striking. Found in Colombia, Ecuador, Venezuela & Peru as a small to medium sized, cool to cold growing epiphyte or terrestrial at altitudes of 1200 to 3200 meters.

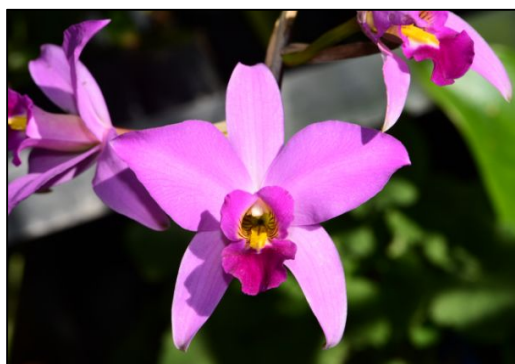

*Pleurothallis rowleei* →

Another species presenting in a variety of colours. Peter & Jane clearly have an affinity for this rich purple colour. Found in Colombia, Ecuador, Costa Rica & Panama at elevations of 350 to 1750 meters as a miniature sized, hot to cool growing epiphyte. IOSPE

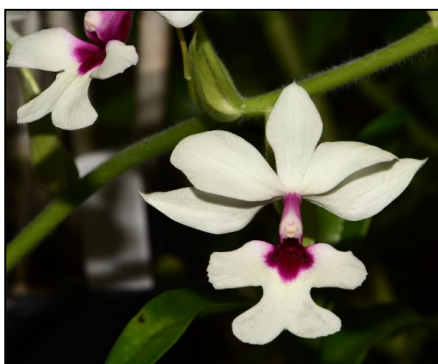

\*FS 2.5cm

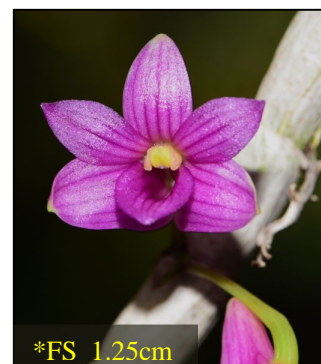

\*FS 6mm

*Laelia anceps*

*Calanthe vestita*

*Den. goldschmidtianum*

\*FS 1.25cm

↑ *Pleurothallis tuerckheimii* 'alba' \*FS 2.5cm

↗ *Pleurothallis palliolata* \*FS 1.5cm

← *Dendrobium x usitae* 'Red Coral' x self \*FS 2cm

*Den. x usitae* is a naturally occurring hybrid between *Den. bullenianm* and *Den. goldschmidtianum* found in the Philippines. Named after Villamor T Usita who discovered the plant in Calayan - one of the five major islands of the Babuyan archipelago. The plant grows hanging from trees from sea level to 300 meters. The pendulous stem can reach a length of 60cm. IOSPE

Exotic blooms from the home of **Gowan Stewart**. Imagine the anticipation awaiting the emergence of the first flowers on a number of these beauties. I so enjoy seeing Gowan's emails in the inbox knowing they will contain something rather special!

\*FS up to 7.5cm

← *Cycnoches warscewiczii*  
Gowan said this is a huge flower. Found in central Costa Rica to Colombia as an epiphytic, deciduous, medium sized, warm growing orchid growing on trees & rotten logs & sometimes as a terrestrial alongside rotting logs at elevations of 700 to 1000 meters. Requires a dry period whilst without leaves. Flowers are non-resupinate (upside-down). **IOSPE**  
The fragrance is reportedly like banana popsicle – yum!

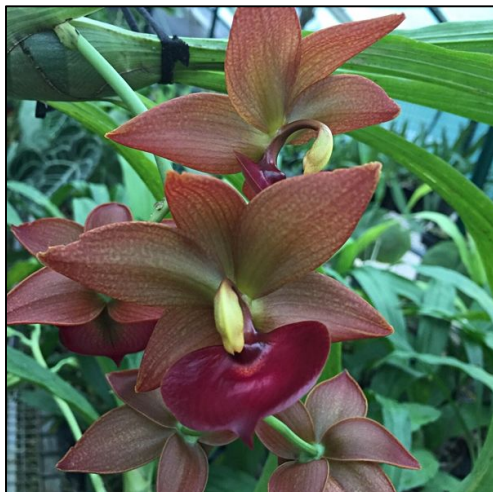

→  
*Cycnoches* Dark Swan x  
Richard Brandon, 1<sup>st</sup> flowering

From the **American Orchid Society** “*Cycnoches*, like orchids of its sister genus *Catasetum*, are unique among orchids in that they bear separate male and female flowers with the occasional appearance of intermediate, hermaphroditic forms. The column structure is the surest method of determining the sex of flowers. The male column is long, curved, and thin. It bears the pollinia prominently at the tip. The female column is relatively short and bearing curved hook-like structures on each side of the tip. The stigma of the female column is found inside the tip of the column.”

Cyc. Opalina, 2<sup>nd</sup> flowering

Cyc. Taiwan Gold

Ctsm. Cirrhaeoides, 1<sup>st</sup> flowering

Den. Brighton's Pansy

Phal. Chia-Shing Hot Kiss  
1<sup>st</sup> flowering. Striking colours!

Phal. Tying Shin Rose Parade  
1<sup>st</sup> flowering.

Magnificent specimens & expertly grown as always from T & P's collection.

*Cattleya* Horace Maxima x *Pot.* Little Toshie

*Bc.* Erin Kobayashi

*Slc.* Tangerine Jewel x *Sc.* Beaufort

*Bc.* Donna Kimura x *Lc.* Love Knot

*Lc.* Maris Song x *Sc.* Beaufort

↑ *Howeara* Mary Eliza. What a glorious display this magnificent specimen plant creates with its graceful, pendulous array of racemes laden with cheerful yellow & red blooms. A very happy plant – grown to its best.

↓ *C. coccinea* Found in south eastern Brazil primarily in tropical coastal forests at elevations of 650 to 1670 meters. Grows as an epiphyte on moss covered trees or sometimes as a lithophyte on rocks in warm to cool montane forests.  
\*FS 3 to 7cm IOSPE

Geoff & Jean Fulcher

Jenny Richardson

*Coelogyne Jannine Banks (Coel. mooriana x flaccida).*

*There are not many hybrids of Coelogyne species, possibly they are not fertile; I've never tried them myself. This one was made by Phil Spence and in my humble opinion the best Coelogyne hybrid made so far. Grows and flowers easily in Sydney climate; most of the flowers on the raceme open at once and last fairly well - GF*

*Coel. Jannine Banks 'Snow White' HCC*

Geoff & Jean Fulcher

Geoff & Jean Fulcher

*Cuitlauzina pulchella (syn. Osmoglossum pulchellum)*  
Mexico, Guatemala, El Salvador at altitudes of 1400 to 2100 metres but not high rainfall. Flowers are a couple of cm. across, white with crystalline texture. An elegant orchid - GF

*Den. parthenium. From near Mt Kinabalu in Sabah, Borneo. Occurs from about 450 to 900 metres elevation, so warm growing. This is the first flowering for us. Flowers a bit more than 2cm across - GF*

*Phalaenopsis deliciosa*  
Syn. *Kingiella philippinensis*  
Geoff & Jean Fulcher

→  
*Phalaenopsis*  
Leopard  
Prince.  
Floriferous  
with big long  
lasting  
blooms.  
Geoff & Jean  
Fulcher

↑ Widespread at low altitudes in S.E. Asia inc. Philippines. Flowers are approx. 1 cm or less across. Warm growing, keep moist except maybe a bit dryer in the middle of winter - GF

An elegant array of blooms from the home of Lee Payne

*C. Burdekin Heights 'Roscoe'*  
a substantial flower approximately 6  
inches across - LP

*Cattleya Chocolate Drop*  
wax like substance and reliable  
flowering orchid - LP

*Cattleya Burdekin Heights*  
'Surprise Simon'

← *Cymbidium dayanum* f. *album*  
(species) First time blooming with 15 inflorescence, long  
lasting and delicate - LP

*Cym. dayanum* is a medium sized, hot to cool growing  
epiphytic or terrestrial species at elevations of 200 to 1800  
meters. It grows low on tree trunks in evergreen lowland  
forests across Assam India, eastern Himalayas, Sikkim,  
Thailand, Cambodia, China, Vietnam, Borneo, Malaysia, the  
Philippines, Sulawesi, Sumatra, Taiwan, Ryukyu Islands and  
Japan. Flowers reach 4 – 5 cm. IOSPE

*Cymbidium Red Pepper 'Janice'* →

← *Onc. Sharry*  
*Baby 'Red Fantasy'*  
What an impressive  
inflorescence on this  
plant of Lee's!

→  
*Cym. Death Wish* is  
one of my favourite  
orchids, long  
lasting, showy,  
lovely fragrance  
LP

*Dendrochillum cobbianum*

\*FS to 1.9cm

←←  
*Dendrochillum wenzelii*  
'yellow'

←  
*Rlc. Momilani Rainbow*  
'The Gypsy'

→  
*Oncidium Twinkle 'Red Hot'*  
very delicate and pretty - LP

Some gorgeous orchids from the home of **Christine Rethers** - including some very impressive specimen plants

*Dendrochilum cootesii* \*FS 1cm  
Only found in the Philippines.  
Would like a bit more heat than I  
can give it - CR

*Stenorrhynchos speciosum* \*FS 1.8cm  
From Central and South America so does  
best with a bit of heat. Very pleased with  
its flower this year – the best yet - CR

*Maxillaria variabilis* (yellow form)  
Lovely orchid, lots of flowers that  
just keep coming - CR

*Dockrillia dolichophylla* (also referred to as *Doc. teretifolia*, *Den. teretifolium*) x *fuliginosa*. It has taken a while (about 10 years!) to flower this well. Not a spectacular flower but lots of them - CR

Whilst Christine says the flowers are not spectacular - what an enchanting floral curtain with the delicate clouds of flowers cascading down the slender round leaves. What a sight – just gorgeous Christine!

*Doc. teretifolia* (*dolichophylla*), common names include bridal veil orchid & rats tail orchid. It is a cool to hot growing epiphyte or lithophyte found in Eastern Australia from Bega to Rockhampton at elevations of 5 to 800 meters. Often in mangroves & rainforests on trees overhanging water in creeks, lakes or swamps but sometimes on rocks. Producing liquorice scented flowers 2.5 to 10cm, that last about 3 weeks.

I remember a plant Henk Van den Berg had in one of his displays at a St Ives Orchid Show that I think was *Doc. teretifolia* – hung up high at the back of his display it was simply glorious.

*Doc. fuliginosa*, common name the sooty coloured Dockrillia & you can see why in the photo from [David Banks](#) to the left. ➔ It is a hot growing epiphyte that blooms several times a year and produces musky scented flowers.

..... I wonder if that combination makes Christine's beauty smells like a liquorice allsort.

*Medicalcar decoratum*  
A creeping, mat-forming  
miniature. Needs plenty of  
light in winter to flower.  
CR

*Masd. Tarnie 'Elizabeth'*  
Flowers well, last year it had  
15 flowers, all out at the same  
time but not so many this year.  
CR

*Paph. Mildred Hunter*  
An old one but a good  
one (first hybridised in  
1937) - CR

*Oncidium pulvinatum*  
Flowers well in winter but at  
my place gets black on the  
leaves, possibly because it is  
a bit too cold here. Flowers  
last for ages - CR

*Cymbidium* Unknown - Lina Huang

*Phal.* Unknown - Lina Huang

*Cymbidium* Unknown - Lina Huang

*Cattleya* Tiffin Bells x *Rlc.* Mount Sylvan - Jessie Koh

*Oncidium* Robsan's Gold  
T & P

(*Epc.* René Marqués x *Rth.* Free Spirit)

*Restrepia cuprea*  
x *guttulata*

*Restrepia brachypus*  
\*FS 6cm

↑ *Pleurothallis semiscabra* What a little cutie this is – like a little jelly baby man with his arms outstretched, wearing a rain hood. I must admit my appreciation for the range of intriguing smaller species orchids our member's grow has increased significantly whilst doing the virtual benching.

The common name is The half rough Pleurothallis which refers to the texture of the labellum. Found in north-western Venezuela at elevations of 1500 to 2600 meters as a small sized, warm to cool growing epiphyte. The 1.5cm non-resupinate (labellum faces upwards) flowers bloom from the base of the leaf. [IOSPE](#)

*Pleurothallis palliolata* x 2 \*FS 1.5cm

←  
*Coelogyne speciosa*

→  
*Cym. Ken Siew*  
(*Cym. erythraeum*  
'Paradise' x  
*Cym. tracyanum*  
'Royale One')

*Oncidium Twinkle*  
'Red Fantasy'

*Cym. erythraeum* 'Paradise' x  
*Cym. pumilum album* 'Peats Ridge'

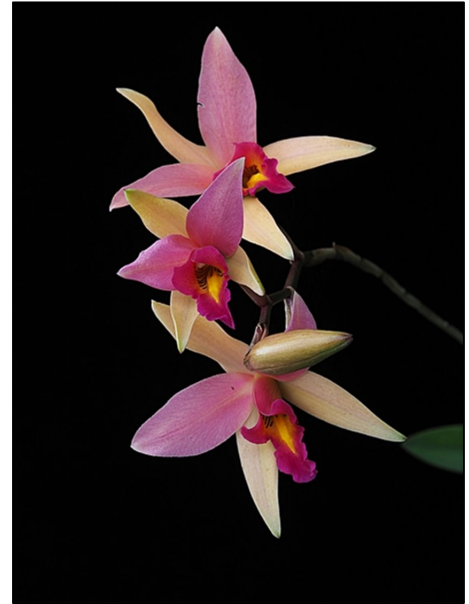

*Cymbidium Francis Ellemere*  
'Dark Red'

*Shombergkia* Unknown

*Laelia* Santa Barbara Sunset – a favourite

*Den.* Burgundy Doll x (Glleant Blood stone?)  
Pretty front & back

*Dendrobium* Unknown

*Laelia anceps* var. *vietchiana*  
'Fort Caroline'

*Dendrobium* Hilda Poxen

*Den.* Botanic Fireworks x  
Rutherford Starburst

*Cymbidium* Amber Harvest 'Misty'  
x Rembrandt 'Masterpiece'

*Cym.* Hiroshima Sweet Eyes

*Cym.* Celtic Imp 'Caprice'

From the home of Jenny Richardson ..... I do so love the dark ones!

*Laeliocattleya Hsin Buu Lady 'Red Beauty'*

*Odontocidium Massai Red near black*

*Lc. Susan Holcombe 'Yellow & Red'*

*Rth. Netrasiri Starbright*

*Rth. Tzeng-Wen Queen*

*Dearest Val*  
*I met Val at my first visit to KOS. Walking around the hall looking at the orchids, I saw her gorgeous face with a beaming, welcoming smile and she beckoned me over for a chat - we just clicked. Val took me under her wing and I became one of her 'adopted' daughters. Val had quite an extended 'adopted' family throughout the orchid community. If you sat with Val at a show or a meeting you would be met with a constant stream of folk coming for a chat, a hug and to catch up with the news. Val always knew all the news! This is Cymbidium Princess Valda, a hybrid my Dad made for my Mum, so with love, I share it with my 'adopted' Mum. Val was one of life's special people, a beautiful soul, generous, kind and a very dear friend. Like so many others, my life is richer for having had her in it. Rest in peace beautiful lady, reunited with your beloved Bernie - you can ride off into the sunset in that side car with him again. I will miss you, our long chats and your warm hugs All my Love, Jenny xox*

*Cymbidium Princess Valda*

*Val Houley 7 Jan 1932 - 9 July 2021 With love from your friends at KOS & all those whose lives you touched*
